Due to the small number of patients enrolled in clinical investigations of lenses, all adverse reactions are reported as occurring in patients with lenses of the same design and are not necessarily attributable to the specific lens design or parameters. Insignificant differences were noted between the two groups in terms of lens comfort, lens-induced effects on the eye, sensitivity to light, redness of the eye, and contact lens-related procedures.

The purpose of this section is to inform the patient of potential side effects and the necessity of proper lens care and counseling. The patient should be counseled as to a recommended follow-up schedule. The patient should be instructed as to a recommended follow-up schedule. The patient should be instructed to consult his or her eye care practitioner before using any medicine or medications in the eye. The patient should be instructed to consult his or her eye care practitioner before using any medicine or medications in the eye.

The patient should be instructed to consult his or her eye care practitioner before using any medicine or medications in the eye.

To the extent that the patient has been advised, follow-up visits are necessary to assure the continuing health of the patient’s eyes. The patient should be instructed as to a recommended follow-up schedule.

To the extent that the patient has been advised, follow-up visits are necessary to assure the continuing health of the patient’s eyes. The patient should be instructed as to a recommended follow-up schedule.

To the extent that the patient has been advised, follow-up visits are necessary to assure the continuing health of the patient’s eyes. The patient should be instructed as to a recommended follow-up schedule.
